WORK EXPERIENCE

DISPENSARY TECHNICIAN ICON GROUP
March 2021 – Current / Brisbane, QLD

- Constant hardware/software troubleshooting and light upkeep of technology on the worksite.
- Utilized several dispensing Software to dispense medications for patients within the hospital.

PROJECTS (please visit andersonbee.com for more info)

SOLSPEAR
CREATOR
2024/25
Stack: Python, MongoDB, Firebase
Developed and deployed a Discord bot to monitor cryptocurrency wallet activity on Solana in real-time, providing instant notifications of any transactions. This project involved automating wallet tracking and integrating with Discord's API for seamless alert delivery.

ANOTHER RECEIPTIFY
CREATOR
2024
Stack: React.js, Vercel
A fun web app that generates Spotify receipts based on your listening history. Inspired by the simplicity of physical receipts, it showcases your favorite tracks, artists and genres in a creative, shareable format

VOLCANO DATA ANALYSIS WEB APPLICATION
CREATOR
2024
Stack: React.js, Node.js, REST API, MYSQL, SWAGGER
Developed a comprehensive web application using React to view and analyse volcano data via a REST API. Extended the API with an Express application, adding new functionalities such as user profile management and authentication using JSON Web Tokens. Utilized technologies including Node.js, MySQL, Swagger, and Knex for backend development and API documentation, and deployed the application on a virtual machine

NUTRITION TRACKING MOBILE APPLICATION
DEVELOPER
2023
Stack: C+, Android Emulator
Over 10 weeks, myself and 4 other developers worked on developing a "Macro Tracking App" through the use of C+ and Android Emulator. Emphasized pair programming to build a functional mobile app for tracking daily nutritional macros, aiding users in making healthier dietary choices.
